Background | What is Pelagios?

Pelagios commons

- A series of projects
- Creating *Linked Open Data* of place references in historical sources
- Developing software Recogito, Peripleo to assist this process
- A *Commons* dependent upon a wider community

Linked Data Annotation

Linked (Geo) Data Annotation

What is it?

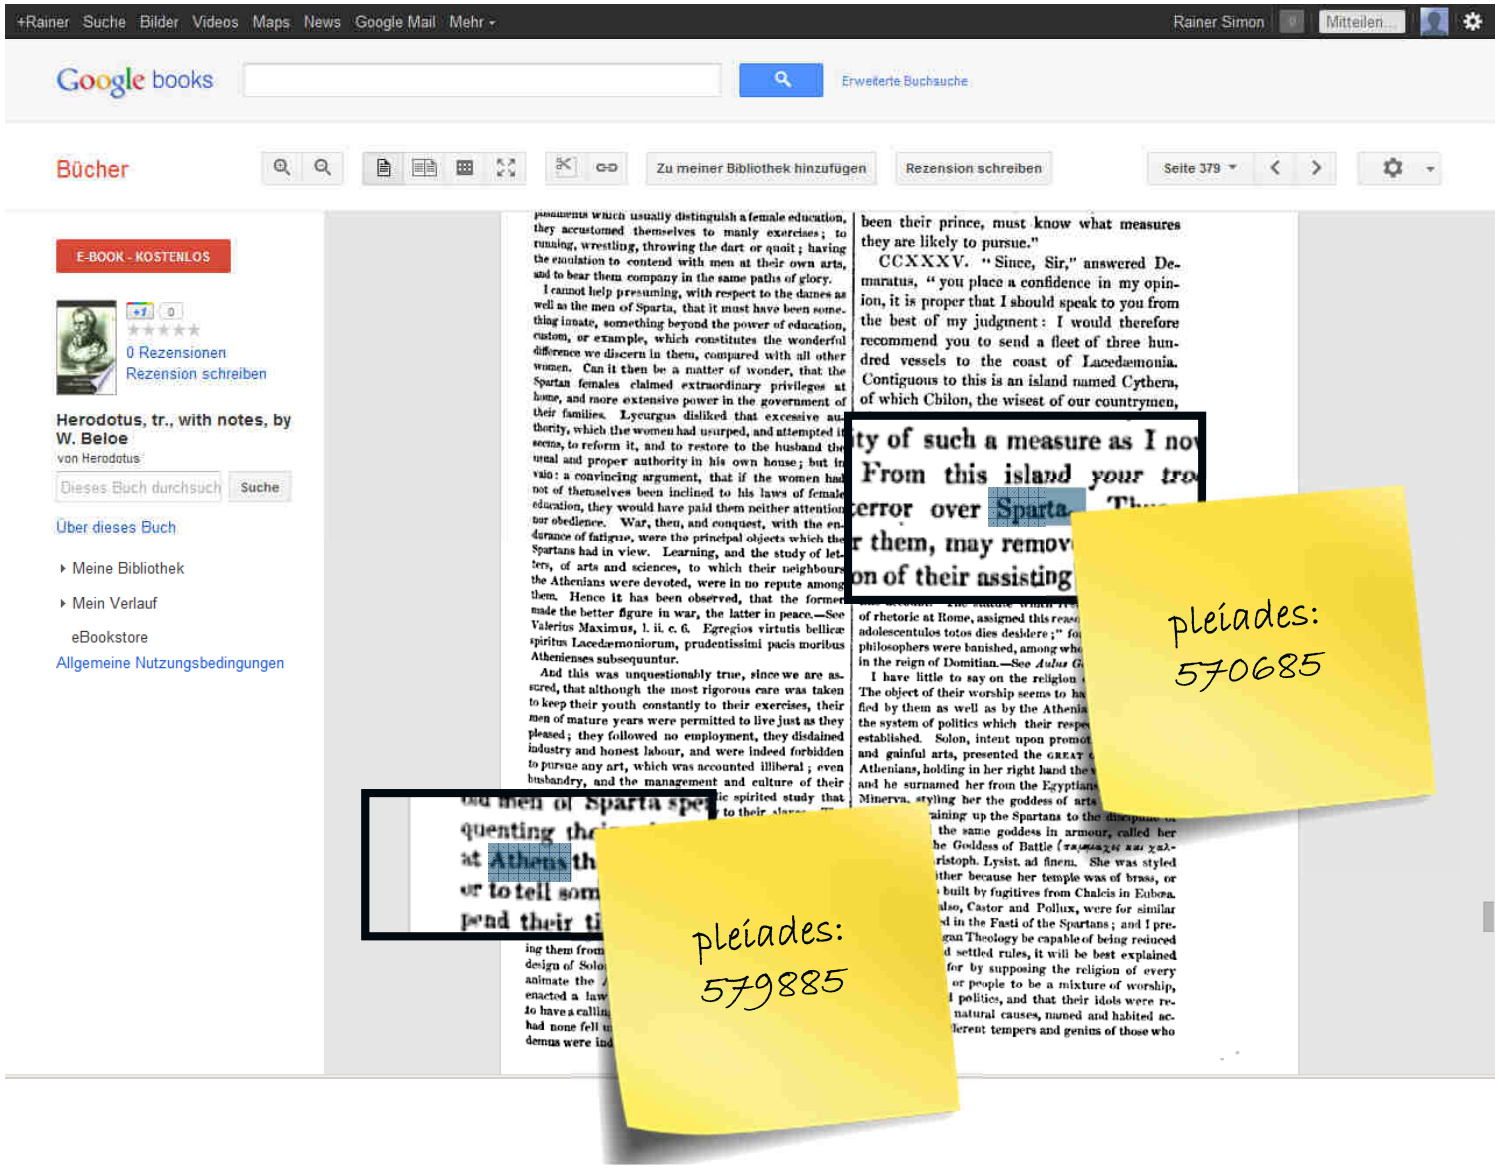
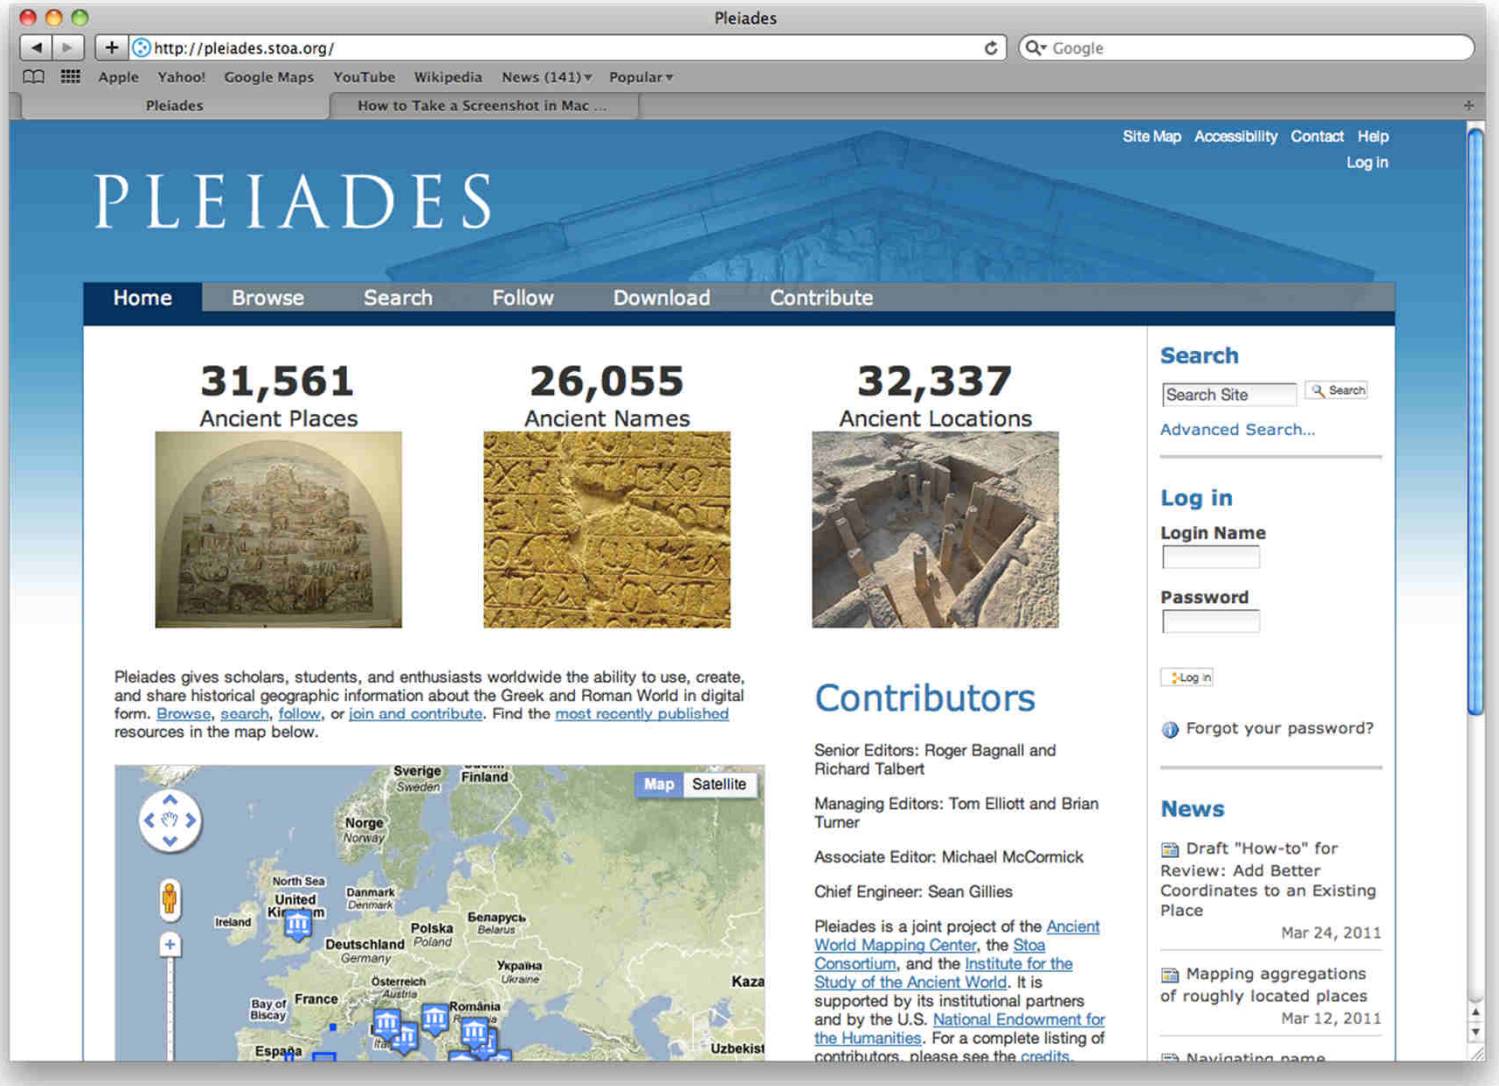
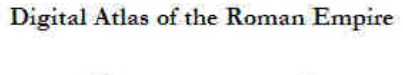
Why do it (the Pelagios way)?

Pelagios | Annotating Documents



The Essential Ingredient | URI Gazetteers





China Historical GIS

…and many **many** more!

How? | Don't Unify the Model – Annotate!

Recogito | Some Highlights

- Free & Open Source
- Personal workspaces
- Access control and sharing for collaboration
- Versioning
- Import plaintext, images in different formats, CSV tables
- Annotated images served through IIIF
- Get your data out in a range of formats: CSV, RDF, GeoJSON

Outlook | Some Plans

- Support for TEI (text) import
- Internationalization (interest in Spanish, Croatian)
- Gazetteers!

and (depending on future funding…)

- Features for managing group/classroom work
- Exploring others' (public) work & discovering related material
- Enhanced modes of collaboration – forking & merging
- IIIF collection support
- …
