

China's Urban Century: Governance, Environment, and Socio-Economic Imperatives

**UrbaChina final conference
Paris, January 15-16, 2015**

UrbaChina; Sustainable Urbanisation in China: Megatrends toward 2050 is the result of an ambitious four year research project (2011-2015) conducted by an international team of academics funded by the European Union within the Framework 7th Programme.

The research process involved extensive data collection, field studies and interviews in several Chinese cities: Beijing, Shanghai, Chongqing, Kunming and Huangshan.

Internationally recognised economists, sociologists, anthropologists, geographers and sinologists have conducted research and exchanged findings in order to grasp the differentiated character Chinese urbanisation, beyond traditional academic frames, bringing each perspective (economic, urbanistic, historic, geographical, anthropological) into play.

We have interviewed planning officers, National Development Reform Commission officials, land developers, village committees, farmers, urban and rural experts, entrepreneurs and others allowing us to better understand China's urbanisation at the grassroots level, and to check the reliability of existing data.
